DataSys Corporation Presents Insights & Beyond

Marlborough, Mass. – Nov. 16, 2006 – DataSys Corporation hosted 40 customers at a presentation aimed at advancing education about Microsoft Great Plains trends. In addition to the keynote address, breakout sessions provided the chance for participants to gain more in-depth information. At the event, which was catered by DataSys customer Currier & Chives, attendees mingled with each other and the DataSys staff before hearing the presentations.

According to Dawn Miles, the Controller at VNA of Lowell, “Today’s event underscored the strength of our relationship with DataSys. They have been consistently attentive to the unique needs of the VNA. They made sure that our implementation project met our initial objectives for purchasing Great Plains. We receive periodic mailings on training programs and seminars, and today’s Insights06 & Beyond seminar was insightful, as the agenda promised! Based on what we learned, we can plan our upgrades for the next few years and understand Microsoft’s direction without having to get that information on our own. We also enjoyed the breakout session where we could pose questions to the DataSys implementation consultants.”

DataSys president Lisa Daigle gave a PowerPoint presentation enlightening customers as to the Great Plains release schedule, with GP Version 10 expected to ship in late spring of 2007 and GP Version 11 to follow approximately a year and a half later. The keynote also covered key trends of Vista and Sharepoint Portal, with comments and participation by attendees.

Following the presentation, customers were given the opportunity to gain more in-depth information during one of the three breakout sessions. In a well-attended session, a DataSys roundtable of consultants was available to answer customers’ Great Plains questions. During the technical session, DataSys developers gave insight on SQL Reporting Services, the new standard in reporting, and eConnect, a key integration tool for Great Plains. Finally, DataSys business partner Harvest Systems demonstrated customer relationship management (CRM) with integration to the Great Plains back office.

Eilene Henderson, Manager of Accounting at SC Direct, summed up her experience. “Having been a customer since 1997, we have attended a variety of events at DataSys. Each time, we have gained valuable information on the benefits of using Microsoft Great Plains as well as learned about the future. Best of all, we get to re-connect with some of the people that we worked with back in 1997—true experts on Great Plains since the beginning. In addition to the events, we receive regular communication such as newsletters and seminars alerting us to key events and Great Plains promotions. With DataSys’ ‘customer of one’ philosophy we are always made to feel we are a top priority.”

About DataSys Corporation

DataSys Corporation, a Microsoft Dynamics Certified Partner specializing in the implementation of Dynamics GP (formerly Great Plains), helps midmarket companies meet their objectives by improving access to mission-critical information. For over ten years, DataSys has built long-term productive relationships that benefit from a deep understanding of its clients’ business and cumulative years of experience with Dynamics GP software. DataSys harnesses the power of Dynamics GP’ functionality, reporting, integration, and customization capabilities to deliver a comprehensive business management solution that expedites core financials, human resources, payroll, project accounting, distribution, warehouse management, and e-business.
