David Laster Aces Microsoft's Implementation Methodology Exam

Marlborough, Mass. – September 22, 2011

David Laster, Senior Applications Consultant at DataSys Corporation, successfully passed the Implementation Methodology Exam for Great Plains. This exam tested competency in these key areas: project planning, analysis and design, pilot testing, rollout and training, post implementation services and support.

This latest accolade added to David's roster of certifications: SQL Server 2008 Implementation and Maintenance, Great Plains Financials, Great Plains Installation and Configuration, and FRx Forecaster Implementation.

According to David, "I've staked my career on the importance of implementing systems using a sound methodology. Preparing for this exam included some 24 hours of study. In particular, my skills ratcheted forward in the area of project scoping, resourcing and planning". David added, "A sound methodology decreases risk to the customer and DataSys, minimizes costs from re-work, and increases efficiency. I pride myself on delivering solutions that work, not just at the time of implementation, but for many years down the line. It's key to use an organized process from gathering requirements to testing to installation."

Sue Tibert, a long-standing DataSys customer, adds, "David comes through the door with a plan, adapts where necessary, and leaves having made a substantial contribution to our business. In particular, we value that David gets it right the first time."
