DataSys Launches Mastering Management Reporter Training

Marlborough, Mass. – September 26, 2011

DataSys Corporation will be offering 1-2 training classes per month to help its customers gain proficiency with Management Reporter, the replacement to FRx Reporter. Management Reporter offers technology improvements, such as 64-bit compatibility and many functionality improvements. During this summer's seminars, customers were especially pleased to see how the new Report Catalog will streamline publishing, organizing, and securing financial statements.

A freshmen class of five customers was recently trained at a Mastering Management Reporter class. David Laster, a Senior Applications Consultant and veteran trainer, provided a customized 50-page training manual and has limited the class size to 5-6 students in order to provide individualized attention. David Laster formerly served on the FRx Advisory Board to give DataSys customers a voice into product development. With the release of Management Reporter, David Laster sees many product improvements that were raised during his tenure on the FRx Advisory Board.

Future class offerings include Migrating to Management Reporter, where customers will learn the steps associated with a successful migration from FRx to Management Reporter.
